Mr. Vishal Gupta

# ?Problem Statement

- Traditional video streaming platforms are centralized, expensive, and provide limited user control.
- They also face issues with pirated content distribution, which negatively impacts the film streaming industry and creators.
- This creates a need for a transparent and ethical streaming platform that supports the industry and provides users with a fast, efficient, and secure streaming experience, as well as greater control over their data and content.

# Our Solution

- Our team will leverage the latest Web3 technologies to create a decentralized streaming platform.
- With our product user control, privacy, and ethical content distribution will be prioritized.
- The underlying blockchain technology of Web3 will be used to prevent the distribution of pirated content.
- Our platform will enable new revenue models based on tokenization and incentivization, allowing content creators and streamers to earn tokens or other forms of digital assets for their contributions.

# How web3 will impact our project?

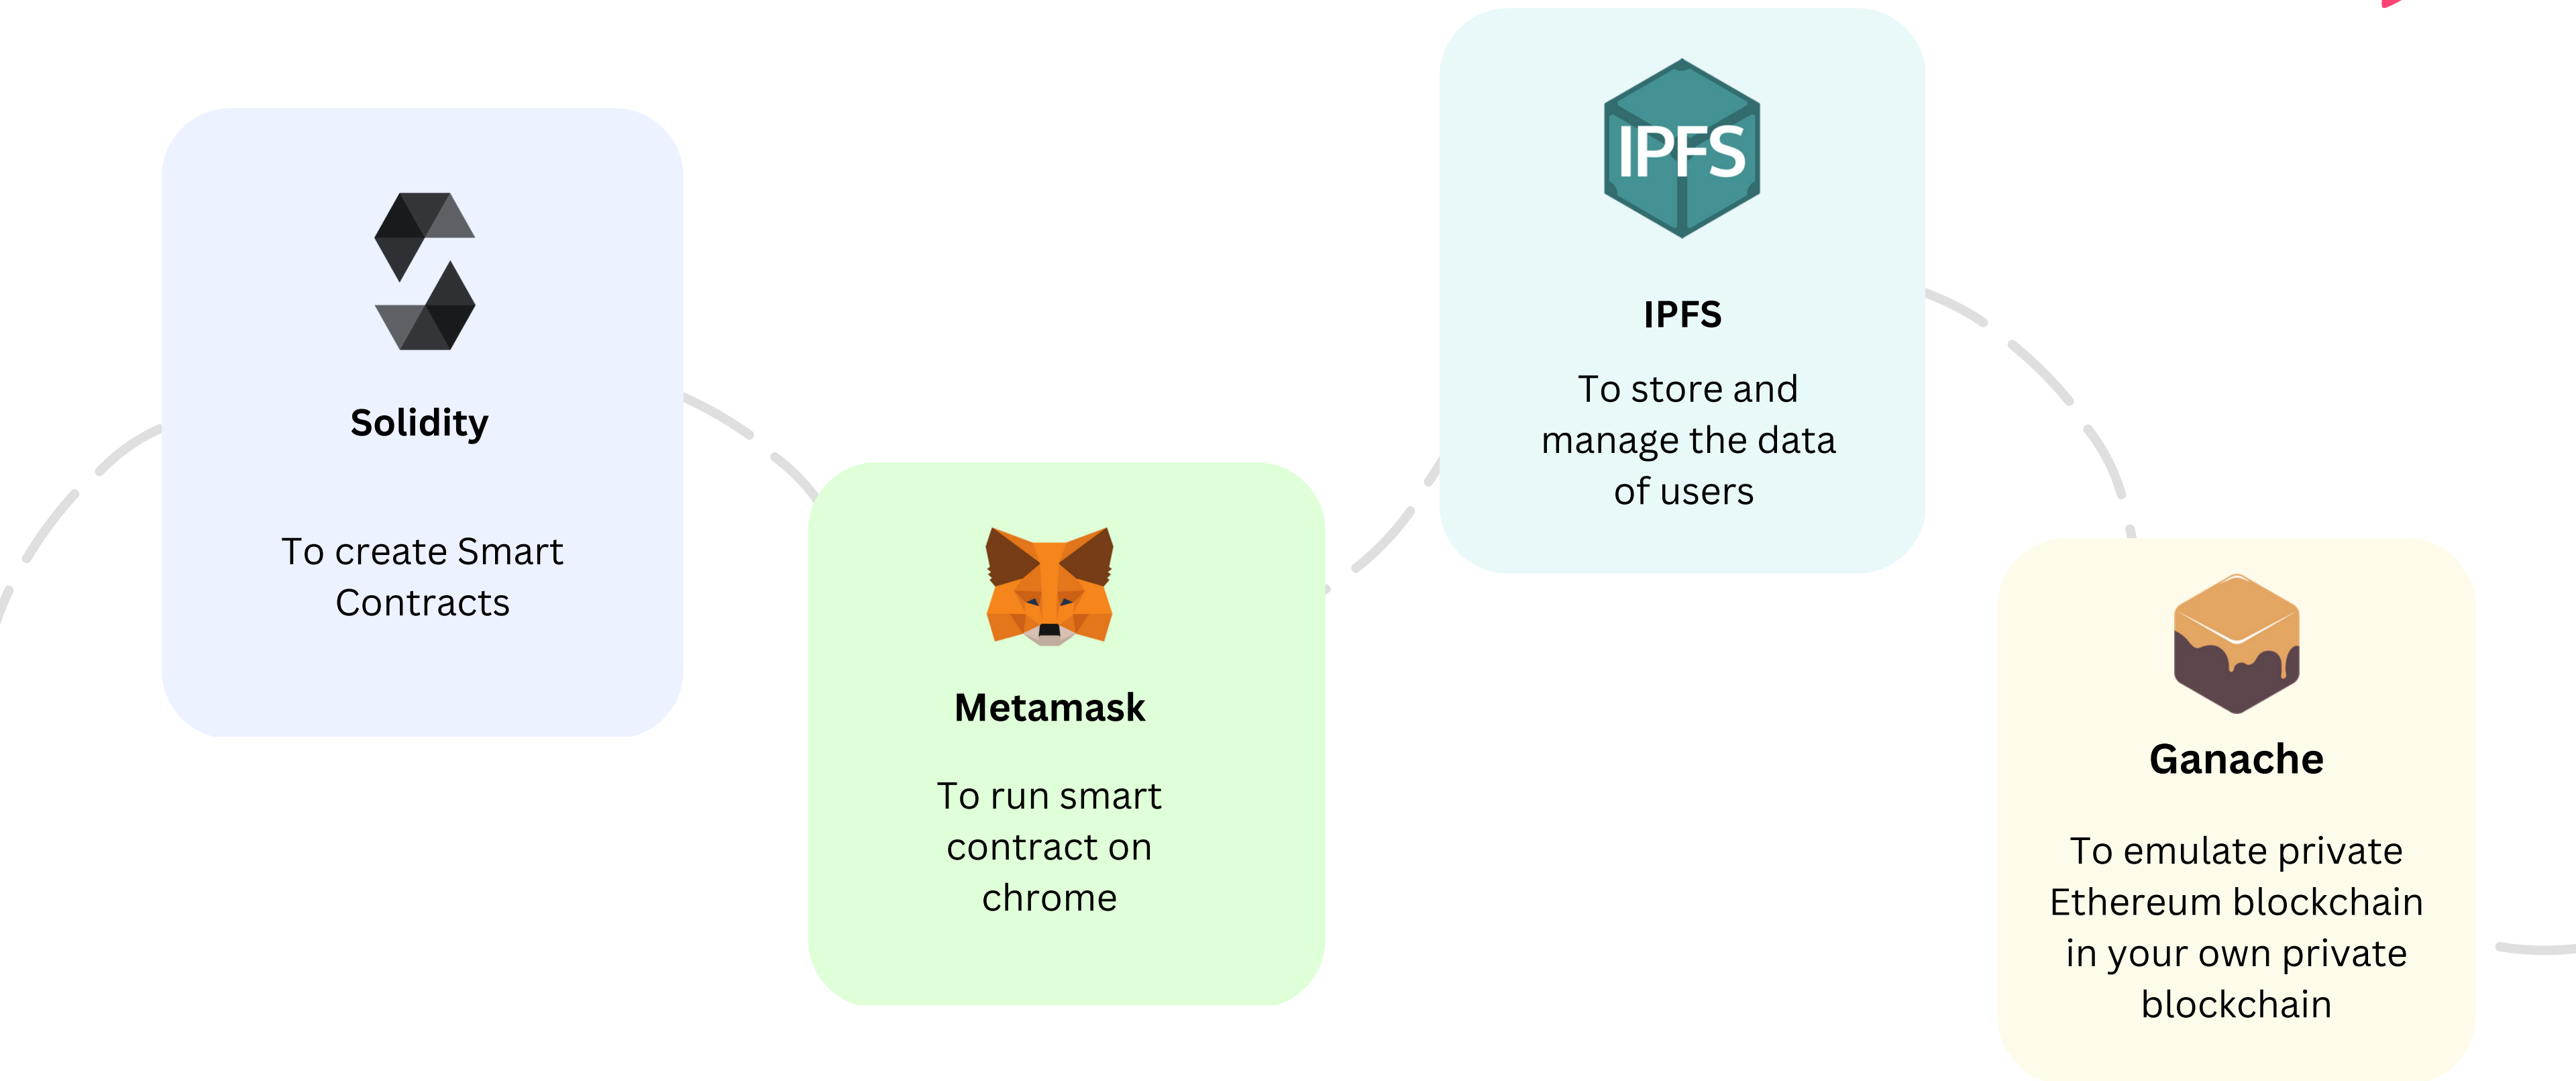

Web3 technology will have a transformative impact on the streaming platform :

- The technology will enable the creation of a decentralized, transparent, and secure platform.
- Web3 will provide faster and more efficient video streaming, reduce buffering times, and improve the overall user experience.
- The platform will have a transparent and immutable record of all content.

# 🔧 Tech Stack

Thank you ! 😊
